

Space Crusade Custom Rules

The purpose of this manual is to add or correct the basic rules of the Space Crusade game by making minor changes and trying to have a balance between Marine and Alien forces. Some are adaptations of official rules from White Dwarf 134 and 145, others are house rules. Mission Dreadnought is treated after those rules.

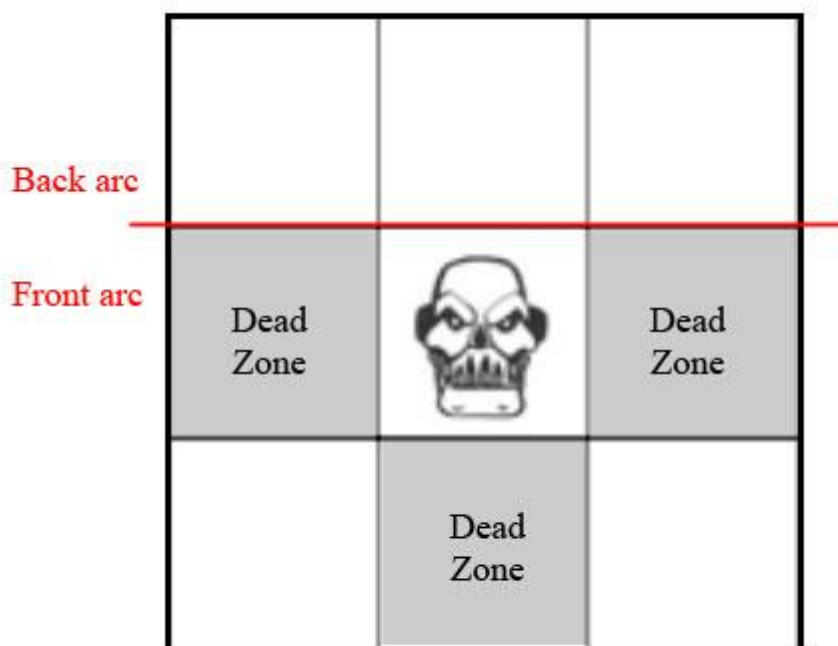

Marine player's turn:

Movement is the Movement action and that firing or hand-to-hand action is the Combat action.

Movement:

Dead Zone: Any miniature has a dead zone on the 3 adjacent non diagonal squares in its front arc. Any opposing miniature that passes through a dead zone must stop there. A miniature may fire while within an opponent's Dead Zone.

Orientation: A miniature can only fire target in its front arc. A figure may change its orientation at any time during its activation (before/after its movement action and/or before/after its combat action)

Firing :

Maximum range: Only heavy and extra-heavy weapons have unlimited range. Special and standard weapons have a range of 24 squares. Hand weapons have a range of 12 squares. The number of squares is calculated from the shooter's base to the target's base.

Extra-Heavy weapons: Las-Cannon, Fusion Gun, Conversion Beam, Heavy Plasma Gun, Cyclone Missile Launcher.

Heavy weapons: Assault Cannon, Missile Launcher, Heavy Bolter, Heavy Flamer.

Special weapons: Plasma Gun, Melta Gun, Grenade Launcher, Sniper Rifle, Flamer.

Standard weapons: Bolter, Storm Bolter, Laser Rifle.

Hand weapons: Shotgun, Bolt Pistol, Laser Pistol.

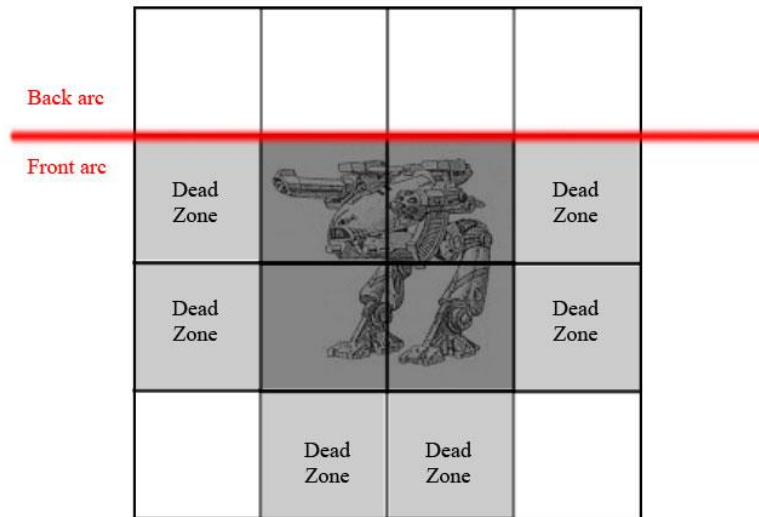

Flamers are special weapons but have different range related to their mode of operation.

The Alien player's turn:

Movement is the Movement action and that firing or hand-to-hand action is the Combat action.

The Dreadnought :

Orientation and Front arc/Back arc (4 squares basis) : The dreadnought can only fire targets in its front arc.

The winner:

The Marine player scores 10 pts per card Events not played by the Alien player (To share between Marine players). The Alien player scores 2 pts per card Events played. He adds the points gained with the Alien casualties and the points for successful Missions to determine the total. Do not subtract the points gained by the Alien player.

The Alien player scores 2 pts for each Event card played. He adds the points earned with Marine losses to determine the total. Each model is worth 15 points if it has standard equipment, 25 if it has a special weapon or a heavy weapon. The Commander is worth 30 points.

Additional Marines player's rules:

A) Awards and Rank :

The difference in points between the Marine player and the Alien player gives the result to be checked on the Combat Effectiveness Table to see if the player gains a rank and / or an award.

After completing at least one mission, you can exchange an Award or an Equipment card for one additional marine.

After completing at least one mission, you can exchange a Rank or an Order card for two additional Marines.

A Marine team cannot have more than 10 miniatures, Sergeant included.

B) Additionnal rules :

Rapid Fire (Bolter and Storm Bolter): A miniature Marine equipped with a Bolter or a Storm Bolter can forfeit its Movement action to fire twice.

Recovery (Heavy/Special Weapons): A miniature Marine equipped with a Bolter can retrieve the heavy/special weapon of a destroyed Marine if it is on a square adjacent to it. A KD miniature cannot benefit from this skill.

Knock Down (All miniatures on a one square basis): A KD miniature no longer blocks Line of Sight (LoS), sees its ARM increased by 1 and will have a penalty of -2 Movement squares when it will rise again at its next phase of Movement.

Tough (All miniatures with this skill): A miniature with Tough skill throws one White Die when it is destroyed. On a score of 1-2, she stays alive but KD. A KD miniature cannot benefit from this skill.

Parry (All models with the skill): A model with the Parry skill can force a melee to be replayed. The two opponents roll the dice again for the fight. You can only use Parry once per fight. A knocked down model cannot benefit from the Parry skill.

Fervor All team figures on the same board game as the model with this skill who loses a 1 point hand-to-hand combat considers it a tie. The model that has this skill benefits from this rule.

C) Clarifications :

Adjacent square: The squares around a miniature (ie for a Marine the 8 squares around its base).

Line of Sight (LoS): Any visible square (see **Line of Sight** in the Instruction Book).

Hand-to-hand and Back arc: A miniature hand-to-hand combat normally against an opponent who is in his back arc.

Hand-to-hand and Dead zone: A model that begins its turn in the Dead zone of an opposing model can exit it freely.

Rapid Fire and Orders: A model that receives the "Fire" order can sacrifice movement and fire three times with its Bolter or Storm Bolter. A model that receives the "Move" command can move once and fire twice with its Bolter or its Storm Bolter: both shots are fired either before or after movement.

Recovery: Only on friendly models

Marines: Applies to all models that are played by the Marines player, not just Space Marines: Scouts, Terminators and Imperial Guards are Marines. Space Marines Bike are not Marines, only the pilot is a Marine.

Friendly figures: Applies to all models that are played by the Marines players.

New order:

Overwatch: Mark one or more Marines, these Marines may not fire during your Turn. However they may fire once during the Alien Player's Turn at any model that moves into their Line of Sight. Rapid Fire special rule is not possible with this order.

Scouts Space Marine:

The Marine player can choose to replace his Marines squad with Space Marine Scouts. It takes 5 scouts and a Scout Commander.

The Scout Commander is equipped with a bolt pistol and a chainsword as standard. Scouts are equipped with a bolt pistol and a combat knife as standard.

1 model can carry a Heavy Bolter. Up to 3 miniatures can be equipped with a Sniper Rifle.

Any Scout equipped with a Bolt Pistol and Combat knife can trade in their gear for a Shotgun or a Bolter.

The Marine player can take the Order and Equipment cards of the Space Marines chapter to equip his Scout team. The cards related to Bolters ("Bolter Pistols" and "Close Assault Blades") also apply to models equipped with Bolt Pistols. Imperial Fist "Combi Weapon" card is obsolete.

All Scouts have an ARM of 1, have 1 Life Point and move 8 squares. Those equipped with a heavy or special weapon have a movement of 6 squares.

All scouts have two White Dice for hand-to-hand combat. Those equipped with bolt pistols have two White Dice for firing and a maximum range of 12 squares.

Any scout equipped with a bolt pistol and a combat knife benefits from the "Recovery" rule.

The Scout Commander has 6 Life Points. It is equipped with a chainsword that allows the use of one Red Die + one White Die for hand-to-hand combat and a bolt pistol that inflicts one Red Die + one White Die for firing with a maximum range of 12 boxes.

The bolt pistol can be replaced by a master crafted bolter that inflicts one Red Die + one White Die for firing up to 24 squares but, in this case, the Scout Commander loses the benefit to *Dive Prone*.

Diving Prone: Scouts are very agile and can drop to the ground to avoid a ranged attack. Only Scouts equipped with a shotgun, a bolt pistol and an combat knife or chainsword can drop to the ground. You can choose to dive prone after the Alien player declares a ranged attack, but before the Dice are rolled. Only attacked Scouts have the right to dive prone. Move the Scout up to one square, and place him on his side on the square to show he's KO'd. This may mean that the opponent may no longer attack, since he may no longer see the Scout in his new square. If this is so, the attack is wasted and cannot be used to attack another target. While knocked down, the Scout can't move and is not allowed to dive prone again. You may choose to stand up a Scout when you next move him.

Scout weapons:

Heavy Bolter: Inflicts two Red Dice on the target. Heavy Bolter carried by Scouts can fire Hellfire ammo. This allows the Heavy Bolter to be fired as if it were a missile launcher. After the shell has been fired the gun must be reloaded before it can fire a hellfire shell again. Reloading replace its combat action in order to be able to use Hellfire ammunition again. The gun can still be used as a Heavy Bolter until it is reloaded.

Sniper Rifle: Inflicts two Red Dice on the target. A Scout equipped with a sniper rifle can forfeit its movement action to add 1 White Die to damage rolls.

Shotgun: Inflicts two White Dice on the target. A Scout equipped with a shotgun rolls his target back the number of spaces indicated by the Dice result if his target is not destroyed. The model thus moved back is also knocked down. If the target encounters another model while backing up, it stops and the two are knocked down. This does not affect models that have a 4-square base like the Dreadnought for example.

Space Marine Terminators:

The Space Marine player may choose to equip his squad with Terminator armor, instead of taking 4 equipment cards.

A Terminator squad has one Commander and 4 Terminators. A Terminator must be equipped with a heavy weapon. The commander still has a Storm Bolter and a Power Sword. Terminators carry a Storm Bolter and Power Fist which they can exchange for a pair of Lightning Claws or a Thunder Hammer and Storm Shield.

The Heavy Weapon Terminator is equipped with a Power Fist for hand-to-hand and choose between a Heavy Flamer, an Assault Cannon or a Cyclone Missile Launcher.

All Terminators have an ARM of 3, move 4 squares and have 1 Life Point.

The Terminator Commander has 6 Life Points and is equipped with a Power Sword that allows the use of two Red Dice for hand-to-hand combat and a Storm Bolter that inflicts two Red Dice for firing.

Terminators Weapons:

Storm Bolter: The Storm Bolter can only damage one target using one Red Die + one White Die.

Assault Cannon: The Terminators' Assault Cannon functions like the Space Marines' Assault Cannon, but uses two Red Dice + one White Die

Heavy Flamer: The Heavy Flamer attacks the same area as the Missile Launcher (the target square and all adjacent squares). All models in this area will be attacked by the total of the two Red Dice.

Cyclone Missile Launcher: The Cyclone Missile Launcher attacks the same area as the Missile Launcher (the target square and all adjacent squares) but the Terminator can fire twice with one Red Die + one White Die . Any miniature in the target square will be attacked with the total number rolled on both dice. All models in an adjacent square will be attacked by the higher of the two dice rolled. If the terminator doesn't move, it can fire too with its storm bolter but without using Rapid Fire rule.

Power Fist: Most Terminators have a power fist in addition to their ranged weapon. It is only used in hand-to-hand using one Red Die + one White Die

Lightning Claws: Terminators with lightning claws only attack hand-to-hand using two Red Dice + two White Dice. A Terminator with Lightning Claws can attack diagonally.

Thunder Hammer and Storm Shield: Terminators with Thunder Hammer only attack hand-to-hand using two Red Dice. A Terminator with Thunder Hammer can attack diagonally.

Thunder Hammer Self-Destroy: Instead of attacking, the Terminator can cause the Thunder Hammer to self-destruct. If he does this, he is destroyed, but all models adjacent to the Terminator are attacked by two Red Dice + four White Dice.

Storm Shield: Storm Shield is used to avoid damage. If the Terminator suffers damage, roll one Red Die. The number on the Dice indicates the number of wounds negated by the shield.

The Imperial Guard:

The Marine player may choose to replace his squad of Marines with Imperial Guards. It takes 6 Imperial Guards, a Sergeant and a Commander of the Imperial Guard.

The Commander is equipped with a power fist and a plasma pistol as standard. The Sergeant is equipped with a bolt pistol and a chainsword as standard. The Imperial Guards are equipped with a LasGun and a combat knife as standard.

Up to 4 models can be equipped with one of the following special weapons: Sniper Rifle, Grenade Launcher, Melta Gun, Flamer and Plasma Gun. The Imperial Guards do not have access to heavy weapons.

Any Imperial Guard equipped with a LasGun and Combat Knife can trade in their gear for a Shotgun or a Bolter.

The Marine player can take the Order and Equipment cards of the Ultramarines to equip his Imperial Guard team. All references to bolter will then also apply to laser rifles and all references to heavy weapons will also apply to special weapons.

All Imperial Guards have an ARM of 1, 1 Life Point and move 8 squares. Those equipped with a special weapon have a movement of 6 squares

All Imperial Guards have two White Dice for hand-to-hand combat except the sergeant equipped with a chainsword which allows the use of one Red Die + one White Die for hand-to-hand combat and a bolt pistol which inflicts one Red Die + one White Die for firing with a maximum range of 12 squares.

Any Imperial Guard equipped with a LasGun and combat knife benefits from the "Recovery" rule.

The Commander of the Imperial Guard has 6 Life Points and ARM 2. It is equipped with a power fist that allows you to use one Red Die + one White Die for hand-to-hand combat and a plasma pistol that inflicts one Red Die + one White Die for firing at maximum range of 12 boxes.

Radio Communication: The Marine player can discard an Equipment card to equip an Imperial Guard with a LasGun with a radio. Once in the game, he can use the radio at the start of his turn to call for reinforcements. He then place two destroyed miniatures from his team on any docking platform. The models act normally on the turn they arrive. Commanders, Sergeants, Psykers, and Ogryns cannot come back as reinforcements.

The weapons of the Imperial Guards:

LasGun: Inflicts two White Dice on the target. An Imperial Guard equipped with a lasgun can forfeit its movement and re-roll 1 White Dice damage after firing.

Grenade Launcher: The grenade launcher functions like a missile launcher except for damage which is the result of one Red Die + one White Die.

Flamer: The flamer affects 6 contiguous squares and inflicts one Red Die + one White Die of damage to the models touched. The player draws a "path" of 6 squares starting from the shooter without using the diagonals and rolls the dice once and for all the figures on them and LoS.

Sniper Rifle: Deal two Red Dice to the target. An Imperial Guard equipped with a sniper rifle can forfeit its movement and add 1 White Die damage to shot.

Melta Gun: Roll two Red Dice: For each point below the target's Armor, the target suffers one damage. Add one Red Die if the target is more than 6 squares from the shooter.

Support for the Imperial Guards:

Ogryn: You can exchange two Imperial Guards for one Ogryn. An ogryn has 2 Life Points, has a 4 squares basis, has an ARM 3 and moves 6 squares.

It is equipped with a Ripper Gun which can be used in both firing and hand-to-hand combat: two Red Dice for hand-to-hand combat and two Red Dice for firing with a maximum range of 12 squares.

An Ogryn benefits from the "*Parry*" and "*Tough*" rules.

Imperial Psyker: You can exchange two Imperial Guards for an Imperial Psyker. A psyker has 1 Life Point, 0 ARM and moves 8 squares. There can be only one Imperial Psyker on the board game.

It is equipped with a force weapon that allows the use of two Red Dice for hand-to-hand combat and a laspistol that inflicts two White Dice for firing with a maximum range of 12 squares.

It benefits from the "*Parry*" rule.

At the start of the game, the psyker chooses 4 event cards that he will use either as such at the beginning of the Marine player's turn or as virtual Life Points in the event of injury. If he chooses to use the card as such, he can only do so once per turn, and then the card goes to the Alien player's discard pile.

Imperial Guards Special Characters:

You can only use special characters if you are the only Space Marine player. A team can only have one special character. Each character eliminated brings 35 points to the Alien player.

Sentinel: You can exchange three Imperial Guards for one Sentinel. A Sentinel has 3 Life Points, occupies 4 squares, has an ARM 3 and moves 6 squares.

It is equipped with a Multi Laser (Same profile as an Assault Cannon) which uses two Red Dice for shooting and a Heavy Chainsaw which uses two Red Dice for melee combat.

The Sentinel follows the same rules as the Alien player's dreadnought regarding movement and weapons. A Sentinel without a Heavy Chainsaw uses one Red die + one White die in melee.

Colonel Zug: You can incorporate Colonel Zug into your Imperial Guard squad by sacrificing an Equipment card. He then replaces the Commander with the same profile: Move 8 squares, has 6 Life Points and ARM 2. He is equipped with an power glove which allows the use of one Red Die + one White Die for melee combat and a master crafted plasma pistol who inflicts one Red die + one White die for shooting with a maximum range of 12 squares.

It benefits from the rule "*Parry*", "*Endurance*" and "*Fervor*"

Master Crafted Plasma Pistol: Can Rapid Fire, can reroll one die to try to improve his score.

Space Crusade Mission Dreadnought Règles Custom

Mission Dreadnought brings new options for players. Here are others ...

We add two recruits for all the options set out above in the rules for Space Crusade: two more scouts for a team of Space Marine Scouts, two more Terminators for a team of Terminators and two additional Imperial Guards for a Guard Imperial team. The options below only apply when playing with the Mission Dreadnought expansion.

I) Marines Player :

1) *Extra-Heavy Weapons* :

You cannot use the "Recovery" rule to recover an extra-heavy weapon.

2) *The Tarantula*:

When the Tarantula is destroyed, its lower part is left as a wreck area. You can cross a wreck area but you can't stay on it. This provides cover which increases a model's Armor by 1 if the Line of Sight between the shooter and the target passes through the wreck area. Wreck areas do not provide cover for models with a base larger than a square.

Adeptus Mechanicus:

The Marine player may choose to replace his Marine squad with an Adeptus Mechanicus team. It takes a Tech Priest, 5 Servitors and two Exploration Modules. There can be only one Adeptus Mechanicus Team on the board game.

The Tech Priest is equipped with a power axe. The Servitors are equipped with a power clamp.

1 Servitor miniature can be equipped with one of the following heavy weapons: Fusion Gun, Heavy Bolter, Heavy Plasma Gun.

Heavy Plasma Gun: The heavy plasma gun is an extra-heavy weapon that inflicts two Red Dice + two White Dice on all models in a row of squares in a straight horizontal, vertical or diagonal line. The dice are thrown once and for all the figurines. If all dice have the same number when rolled, the shooter is destroyed just after fire.

A Servitor equipped with a power clamp can take a Tarantula.

The Marine player can take the Order and Equipment cards of the Ultramarines to equip his Adeptus Mechanicus team. The "Bio-Scanner" and "Bolt Pistols" Equipment cards and the "Close Assault" Order card are inaccessible.

All Servitors have an ARM of 1, 1 Life Point and move 6 squares, even those equipped with a heavy weapon or extra-heavy weapon.

All Servitors equipped with a power clamp have two Red Dice for melee combat except the one equipped with a heavy weapon which has two White dice for melee combat.

The Adeptus Mechanicus miniatures do not benefit from the "Recovery" rule, but any Servitor equipped with a power clamp can use the Tarantula.

The Tech Priest has 6 Life Points, an ARM of 2 and move 6 squares. It is equipped with a power axe that allows the use of two Red Dice + two White Dice for melee combat.

Recognition Modules move 8 squares. They shoot 12 squares using two White Dice and do not engage in melee. Their armored value is 3 and they can be destroyed by shooting or melee in the same way as a Tarantula. They are also replaced by a wreck area if they are destroyed.

Special rules for Tech-Priest:

Repair: The Tech Priest can repair a damaged Tarantula. He must be in an adjacent square and sacrifice his combat action to do so. The Tarantula can be used during the turn it was repaired.

Servo-arm: The Tech-priest can move a friendly model on one square basis: It is then moved from one square adjacent to the Tech-priest to any other square adjacent to the Tech-priest. He can do so at any time during his activation: before or after his movement, before or after his shot.

Tech Expert: The Tech Priest can use the Tarantula.

Adeptus Mechanicus support:

Ogryn Slave: You can exchange two models for one Ogryn Slave. An Ogryn Slave has 2 Life Points, occupies 4 squares, has an ARM 3 and moves 6 squares.

It is equipped with two power gauntlets that use two Red Dice + two White Dice for melee combat.

An Ogryn Slave benefits from the "Parry" and "Tough" rules.

When eliminated, it brings 25 points to the Alien player.

Inquisition :

The Marine player can choose to replace his Marine squad with an Inquisition team. It can take up to 3 Inquisitors, a Missionary and as many Imperial Recruits (Planetary Defense Force / Redemptionnists) as it wishes to arrive at a total of 9 models. There can be only one Inquisition Team on the board game.

The Inquisitors are equipped with an energy weapon and a plasma pistol. The Missionary is equipped with a laser gun and a relic staff as standard. Imperial Recruits are equipped with a LasGun and combat knife as standard.

Up to 3 miniatures except Inquisitors can be equipped with one of the following special weapons: Grenade Launcher, Melta gun, and Flamethrower. Imperial Recruits do not have access to heavy weapons.

An Imperial recruit can exchange his weapons for an Eviscerator.

Eviscerator: The Eviscerator is a two-handed melee weapon that inflicts two Red Dice + two White Dice in close combat.

Any Imperial recruit equipped with a LasGun and combat knife can trade in their gear for a rifle.

The Marine player can take the Order and Equipment cards of the Ultramarines to equip his Inquisition team. All references to bolter will then also apply to laser rifles and all references to heavy weapons will also apply to special weapons. The "Digital Weapons" Equipment card and the "Close Assault" Order card are not accessible.

All Imperial Recruits have an ARM of 0, 1 Life Point and move 8 squares. Those equipped with a special weapon have a movement of 6 squares.

All Imperial Recruits have two White Dice for melee combat.

Any Imperial Recruit equipped with a LasGun and combat knife benefits from the "Recovery" rule.

The Inquisitors move 6 squares and are equipped with a power weapon which allows the use of one Red Die + one White Die for melee combat and a plasma pistol which inflicts one Red Die + one White Die for shooting with a maximum range of 12 squares.

The Inquisitors have 6 Life Points which they share: Each time an Inquisitor takes damage, we remove it on the console regardless of which model took the damage. When only 3 Life points remain, the next injury an Inquisitor takes will destroy it.

The Missionary has a movement of 8 squares, an ARM of 0 and 1 Life Point. It is equipped with a relic staff that allows the use of two Red Dice for melee combat and a laser gun that inflicts two White Dice for shooting with a maximum range of 12 squares.

Enhanced Force Field: The missionary wears a force field which increases his armor and all armor for friendly figures on adjacent squares by 1.

Rosarius: When the missionary is damaged, throw one Red Die: All result except 0 cancel the damage.

Inquisition support:

Sisters of Battle Canoness: You can exchange two Imperial Recruits for a Canoness. A Canoness has 1 Life Point, has an ARM 2, and she moves 6 squares. There can be only one Canoness on the board game.

It is equipped with an Office Staff which allows you to use one Red Die + one White Die for melee combat and a plasma pistol which inflicts one Red Die + one White Die for shooting with a maximum range of 12 squares.

It benefits from the "Tough" rule.

Act of Faith: Any friendly figure located on a square adjacent to the Canoness that should be destroyed is in fact KO'd with a Life Point. Does not work on models already Knocked Down or if the Canoness herself is Knocked Down.

When eliminated, it brings 25 points to the Alien player.

Inquisition Special Characters:

You can only use special characters if you are the only Space Marine player. A team can only have one special character.

Uriah Jacobus: You can replace your Missionary with Uriah Jacobus. He has a movement of 8 squares, an ARM of 0 and 1 Life Point. It is equipped with a relic staff that allows the use of two Red Dice for melee combat and a Shotgun that inflicts two White Dice for shooting with a maximum range of 12 squares.

It benefits from the "Tough" and "Fervor" rule.

Enhanced Force Field: The missionary wears a force field which increases his armor and all armor for friendly figures on adjacent squares by 1.

Rosarius: When Uriah Jacobus is damaged, throw one Red Die: All result except 0 cancel the damage.

Redemptor Kyrinov: You can replace an Inquisitor with Redemptor Kyrinov. It has a movement of 8 squares, an ARM of 0 and 1 Life Point. It is equipped with a relic staff that allows the use of two Red Dice for melee combat and a bolt pistol that inflicts two White Dice for shooting with a maximum range of 12 squares.

He benefits from the "Fervor" rule.

Rosarius: If Redemptor Kyrinov suffers a wound, roll a Red die. If any other result than 0, the wound is canceled.

Reinforcements: Once in the game, Redemptor Kyrinov can call for reinforcements at the start of his turn. He then repositioned two destroyed miniatures from his team on any docking platform. The models act normally on the turn they arrive. Inquisitors, Missionaries and Special Characters cannot come back as reinforcements.

A special character eliminated brings 35 points to the Alien player.

Space Marines support:

You can take only one support for your Space Marines team and there can only be one of each type on the board game. The Imperial Fist player chooses first, then the Blood Angels player and finally the Ultramarines player.

Techmarine: You can exchange two Marines for one Techmarine. A Techmarine has 1 Life Point, has an ARM 2, and moves 6 squares.

It is equipped with a Bolter which uses two White Dice for shooting and a Power Axe which uses two Red Dice for melee combat. He benefits from the same rules as the Tech-Priest: "Repair", "Servo-arm" and "Tech Expert".

Apothecary: You can exchange two Marines for one Apothecary. An Apothecary has 1 Life Point, has an ARM 2 and moves 6 spaces.

It is equipped with a Narthecium which allows you to use one Red Die + one White Die for melee combat and a plasma pistol which inflicts one Red Die + one White Die for shooting with a maximum range of 12 boxes.

He benefits from the "*Tough*" rule.

Narthecium: Any friendly figure located on a square adjacent to the Apothecary that should be destroyed is in fact KO'd with a Life Point. Does not work on models already KO'd or if the Apothecary himself is KO'd.

Chaplain: You can exchange two Marines for one Chaplain. A Chaplain has 1 Life Point, has an ARM 2 and he moves 6 squares.

It is equipped with a Crozius Arcanum which allows the use of two Red Dice for melee combat and a bolt pistol which inflicts two White Dice for shooting with a maximum range of 12 squares.

It benefits from the "*Parry*" and "*Fervor*" rule.

Rosarius: When the chaplain is damaged, throw one Red Die: All result except 0 cancel the damage.

Each character eliminated brings 25 points to the Alien player.

Space Marines Special Characters:

You can only use special characters if you are the only Space Marine player. A team can only have one special character.

Dreadnought: You can exchange three Space Marines for one Dreadnought. A Dreadnought has 3 Life Points, occupies 4 squares, has an ARM 3, and moves 4 squares.

It is equipped with the choice of a Twin Laser Cannon, an Assault Cannon (Same profile as a Terminator Assault Cannon) or a Heavy Plasma Gun for shooting and a Combat Fist for melee combat. He can exchange his Combat Fist for a Cyclone Missile Launcher (In this case, he fights in melee with one Red die + one White die).

Combat Fist: Uses two Red Dice and two White Dice for melee combat and incorporates a storm bolter.

The dreadnought follows the same rules as the Alien player's dreadnought regarding movement and weapons. A dreadnought without a Combat Fist uses one Red die + one White die in melee.

Mephiston: You can incorporate Mephiston into your Blood Angels Space Marines squad by sacrificing two Equipment cards. He then replaces a Marine who carries a heavy weapon with the following profile: Movement of 6 squares, 1 Life Point and ARM 3. He is equipped with a force sword which allows the use of two Red Dice for melee combat and a master crafted plasma pistol that inflicts one Red die + one White die for shooting with a maximum range of 12 squares.

Renowned Librarian: Mephiston uses the rules of Terminator Librarian. He can also use his 4 psy power cards as virtual Life Points in case of injury.

It benefits from the "*Parry*" and "*Tough*" rule.

Master Crafted Plasma Pistol: Can Rapid Fire, can reroll a die to try to improve his score.

A special character eliminated brings 35 points to the Alien player.

Scouts Space Marines support:

You can take only one support for your Scout team. The Imperial Fist player chooses first, then the Blood Angels player and finally the Ultramarines player.

Imperial Assassin: You can exchange two Scouts for an Imperial Assassin. An Imperial Assassin has 1 Life Point, has an ARM 2, and moves 8 squares. There can be only one Imperial Assassin on the board game.

It is equipped with an Executing Pistol which uses two Red Dice for shooting and a Combat Blade which uses two Red Dice for melee combat.

It benefits from the following rules:

Stealth: You cannot target the assassin if he is more than 8 squares from the shooter. It only blocks Lines of Sight if it is between the 8 squares that separate a shooter and its target.

Leap: The assassin ignores intervening figures and dead zones during his movements.

Back stab: The assassin adds one White Die to melee if he is in his opponent's back arc.

Marksman: The assassin can forfeit his Move action to add one White Die to the Shot.

Scout Bike: You can exchange two Space Marine for a Space Marine Bike. A Space Marine Bike has 1 Life Point, an ARM 3 and it moves 8 squares. The bike is 3 squares long and 1 square wide.

He is equipped with a Bolt Pistol and a Combat Blade and uses two White Dice for melee combat.

The bike follows the same rules as the Tarantula. It has an Arm 5.

You can either attack the bike or the pilot for melee combat. If the bike is destroyed, replace it with wreck markers and place a Scout equipped with a Bolter on one of the adjacent squares. If the Scout is destroyed, the bike is left in place and a Scout equipped with a Bolter can use it if he is on a square adjacent to it during its Movement phase.

For the shots, she uses Twin Bolters which can either make two shots with two White Dice, or a single shot with four White Dice. She can only shoot in her front arc.

The bike is moved counting from its front edge. It can pivot like the Tarantula around its middle square. Unlike the Tarantula, the Space Marine Bike can move and fire.

It also benefits from the following rule:

Fast: The biker can sacrifice its Combat Action to move an additional 4 squares. This bonus is not doubled with "Order" cards which increase movement.

Sisters of Battle Canoness: You can exchange two Scouts for a Canoness. A Canoness has 1 Life Point, has an ARM 2, and she moves 6 squares. There can be only one Canoness on the board game.

It is equipped with an Office Staff which allows you to use one Red Die + one White Die for melee combat and a plasma pistol which inflicts one Red Die + one White Die for shooting with a maximum range of 12 squares.

It benefits from the "Tough" rule.

Act of Faith: Any friendly figure located on a square adjacent to the Canoness that should be destroyed is in fact KO'd with a Life Point. Does not work on models already Knocked Down or if the Canoness herself is Knocked Down. In the case of a Scout bike, the pilot finds himself knocked out on a square adjacent to the bike.

Each character eliminated brings 25 points to the Alien player.

Terminator Space Marines support:

You can take only one support for your Space Marine Terminator team. Each character eliminated brings 35 points to the Alien player.

Chaplain Terminator: A Chaplain Terminator can only join a Terminator squad. It then replaces a Terminator and you have one fewer badge of distinction (so one less equipment card on the bonus of distinction badges).

The Chaplain has 1 Life Point, an ARM 3 and is equipped with an Crozius Arcanum which allows to use of two Red Dice for hand-to-hand combat and a Storm Bolter which inflicts one Red Die + one White Die in firing.

It benefits from the "*Parry*" and "*Fervor*" rule.

Rosarius: When the chaplain is damaged, throw one Red Die: All result except 0 cancel the damage.

Librarians: Librarians are high performing psykers trained in the use of their powers in combat. A Librarian can only join a Terminator squad. It then replaces a Terminator and you have two fewer badges of distinction (so two less equipment cards on the bonus of distinction badges).

The Librarian has 1 Life Point, an ARM 3 and move 4 squares. He is equipped with an Force-Axe which allows to use of two Red Dice + two White Dice for hand-to-hand combat and a Storm Bolter which inflicts one Red Die + one White Die in firing.

Using psychic cards:

To represent the psychic powers of Librarians, each Space Marine player has 12 cards divided into 4 groups: Psionic (yellow), Power (red), Telekinesis (green) and Time (blue).

At the start of each game, Space Marine players who have a Librarian in their squad can select FOUR cards from these 12. You can only choose one card of each color.

If a Librarian wishes to use his psychic powers, the player informs the Alien player at the start of the turn and places the appropriate card, face up, on the table. He can only play one card per turn.

The Librarian cannot take any other action when using a psych card, unless the rules say otherwise. All psy cards are removed from the game after use.

Psionic cards (yellow):

CONTROL

The Librarian sends a beam of psychic energy into an enemy's mind, controlling their thoughts and actions.

Control can be cast on any Alien model that is the Librarian Line of Sight and within 6 squares. The Space Marine player can use the controlled model to move, shoot, or attack in hand-to-hand combat as if it were his own. The controlled model retains all of its normal stats to move and attack. The Librarian loses control of the model when it is the Alien player's turn.

SCAN

The Librarian sends a scintillating stream of psychic power before him able to see with his mental eye through doors and behind turning hallways.

The Space Marine player nominate any two rooms on the board, and any blips tokens in these rooms must be revealed and converted into models.

SMITE

The Librarian releases a jet of psychic energy that attacks his enemies using their hatred towards him.

All Alien models (apart from Dreadnoughts) within the area of effect similar to that of a missile launcher are destroyed. Dreadnoughts lose one Life Point.

The Power cards (red):

HELLFIRE

The Librarian unleashes a roaring blaze of psychic energy that fills the affected area with huge red and orange flames.

Orks and Gretchins are automatically destroyed by flame if they are in the area of effect. If there are other alien models in the area of effect, the Space Marine player must roll two Red Dice for each one to see if they are destroyed. Area of effect similar to that of a missile launcher.

The range of Hellfire is 8 squares and the central target must be in Line of Sight. Hellfire blocks Line of Sight for the whole of the Space Marine player's turn.

LIGHTNING ARC

A flash of psychic energy flies from the Librarian's hands to strike down the chosen target, and then bounces from enemy to foe until its destructive power ends.

The Lightning Arc can hit all targets within its 10 square area of effect and within sight of the Librarian. For each alien hit by the Lightning Arc, roll two Red Dice. If the total is greater than the alien's armor value, this model is destroyed. The Lightning Arc will continue to attack aliens in the area of effect and in sight of the Librarian until he fails to take out a model. When this happens, the Lightning Arc's power is exhausted and the attacks cease.

The Lightning Arc can hit up to 10 targets within sight of the Librarian as long as it does not pass through more than 10 spaces, starting with any space adjacent to the Librarian.

VORTEX

The Vortex is only used when the Librarian realizes that he has no longer any hope of survival and chooses to sacrifice his own life for his Space Marines brothers. He unleashes all of his psychic power in a raging whirlwind of pure energy.

Vortex is a psychic effect that destroys everything it touches, including the Librarian himself. Once released, the Vortex acts on its own: The Vortex token is placed so as to cover 4 squares, one of which must be that of the Librarian. The latter is then removed from the game. At the end of the Alien player's next turn, roll a normal 6-sided dice to see the path of the Vortex. If the result is 1, 2, 3 or 4, it moves 2 spaces in the direction indicated on the Vortex token. If the dice rolls a 5 or a 6, it is extinguished without further danger.

The Vortex destroys any models, doors, or item tokens it touches that are immediately removed from play. The Vortex will travel straight through walls. If it moves completely outside the game board, the Vortex will not return and will be removed from play. A Vortex token blocks Lines of Sight.

Telekinesis cards (green):

BLAST

Emerald rays shoot out from the hands of the Librarian who throws back what they touch. The Blast itself can be thrown at a model, objects like doors or obstacles.

The thrown object and therefore its area of destructive effect moves directly back 5 squares. Thrown objects never move diagonally. Any alien figurines in their path are automatically destroyed, except dreadnoughts which lose one hit point.

The targeted object must be in sight of the Librarian when the Blast card is played.

JINX

The Librarian can send a Jinx to any Android or Dreadnought, causing temporary malfunctions.

The Jinx can only be used on Androids and Dreadnoughts, and takes effect automatically. All miniatures affected by the Jinx are unusable for one turn. They cannot move or shoot. . All targets must be seen by the Librarian when the Jinx is cast.

If the card is played on a Dreadnought, it only affects one model. Otherwise, this card can hit up to 3 Androids within sight of the Librarian. The Jinx has a range of 5 squares

TELEPORT

Using his powerful psychic ability, the Librarian can teleport himself to anywhere within a section of the board (a quarter of the total board). He must do this at the start of the turn. He can then do other actions (except using another psychic card) such as moving, using a weapon, or engaging in hand-to-hand combat.

Time cards (blue):

BURST OF SPEED

The Librarian creates a time-acceleration zone around him, it seems to him that everyone around him is barely moving.

The Space Marine player uses this card after moving and fighting. This allows the Librarian to start a new round immediately after his first.

He can move, ranged, or hand-to-hand attack this turn, as usual, but he cannot play another psychic card.

WARP TIME

The Librarian uses his psychic powers to slow down time in a given area.

The Librarian casts Warp Time on an entire section of the board (a quarter of the total board).

Warp time affects all Space Marines miniatures, allowing them to play a second turn like the Speed card.

The Librarian, on the other hand, cannot move or attack due to the intense focus required for Warp Time to work.

AURA

An Aura is a psychic shield that protects the Librarian for a turn.

When the card is played, the Librarian's armor increases to 4 for one turn.

Playing this card does not prevent the Librarian from moving or firing, but he must play it at the start of the turn.

IMPORTANT NOTE ABOUT BLIPS: Note that Scan, Vortex, and Breath cards affect all blips, in the same way they affect alien models.

Each character eliminated brings 35 points to the Alien player.

II) Alien Player:

Objective Tokens:

The Alien player can place up to 4 Objective tokens on the board game before the start of the game. Each token occupies a square. You can cross an Objective token but you cannot stay on it. It provides potential cover which increases a model's Armor by 1 if the Line of Sight between the shooter and the target passes through the Objective token. Objective tokens do not provide cover for models with a base larger than one square.

The Marine player can search an Objective token by sacrificing his Combat action. Roll two Red Dice:

0: Nothing

1-2: Trap: The figure that searches the token is knocked out.

3-4: Equipment reload: Allows you to play a discarded Equipment card (From any team).

5-6: Reinforcement: A destroyed figure returns via the docking platform.

III) New chapter:

Dark Angels:

In addition to classic weaponry, you can equip your Marines with a Heavy Plasma Launcher, Melta gun, or Flamer.

Equipment Cards:

Melta Bomb

Blind Grenades

Bolt pistols

Targeter

Targeter

Sharpshooters : All your Marines equipped with a bolter roll an extraneous White Die for shots. Remove the die with the lowest result. Remains in use for the entire mission.

Brother-in-Arms: Your Commander can suffer an injury to save a Marine that has just been destroyed. Remove a Life Point to the Commander and leave the Marine on board. Remains in use for the entire mission.

Combat Shield: Your Commander must be equipped with a Bolt Pistol and a Power Weapon in order to use this card. Your commander wears a shield which increases his armor value by 1 and allow to re-roll a dice in hand-to-hand combat. Remains in use for the entire mission.

Order Cards:

Fire!
Move it!
By sections!
Close Assault!
Overwatch

Heavy Fire: All your Marines equipped with a bolter replace the White Dice for shooting with Red Dice. This order works with the rules of Rapid Fire.

Dark Angels Support:

The Dark Angels have access to the same supports as the other chapters (Chaplain, Apothecary or Techmarine). You can take only one support for your Dark Angel team.

They have also access to:

Space Marine Bike: You can exchange two Space Marines for a Space Marine on Assault Bike. A Space Marine on Assault Bike has 1 Life Point, an ARM 4 and it moves 8 squares. The bike is 3 squares long and 1 square wide. There can be only one bike per squad.

He is equipped with a Bolt Pistol and a Combat Blade and uses two White Dice for melee combat.

The bike follows the same rules as the Tarantula. It has an Arm 5.

You can either attack the bike or the pilot for melee combat. If the bike is destroyed, replace it with wreck markers and place a Space Marine equipped with a Bolter on one of the adjacent squares. If the Space Marine is destroyed, the bike is left in place and a Space Marine equipped with a Bolter can use it if he is on a square adjacent to it.

For the shots, she uses Twin Bolters which can either make two shots with two White Dice, or a single shot with four White Dice. She can only shoot in her front arc.

The bike is moved counting from its front edge. It can pivot like the Tarentula around its middle square. Unlike the Tarentula, the Space Marine on Assault Bike can move and fire.

It also benefits from the following rule:

Fast: The biker can sacrifice its Combat Action to move an additional 4 squares. This bonus is not doubled with "Order" cards which increase movement.

A support eliminated brings 25 points to the Alien player.

Dark Angels Special Characters :

You can only use special characters if you are the only Space Marine player. A team can only have one special character.

Dreadnought: You can exchange three Space Marines for one Dreadnought. A Dreadnought has 3 Life Points, occupies 4 squares, has an ARM 3, and moves 4 squares.

It is equipped with the choice of a Twin Laser Cannon, an Assault Cannon (Same profile as a Terminator Assault Cannon) or a Heavy Plasma Gun for shooting and a Combat Fist for melee combat. He can exchange his Combat Fist for a Cyclone Missile Launcher (In this case, he fights in melee with one Red die + one White die).

Combat Fist: Uses two Red Dice and two White Dice for melee combat and incorporates a storm bolter.

The dreadnought follows the same rules as the Alien player's dreadnought regarding movement and weapons. A dreadnought without a Combat Fist uses one Red die + one White die in melee.

Ezekiel: You can incorporate Ezekiel into your Dark Angels Space Marines squad by sacrificing two Equipment cards. He then replaces a Marine who carries a heavy weapon with the following profile: Movement of 6 squares, 1 Life Point and ARM 3. He is equipped with a force sword which allows the use of two Red Dice for hand-to-hand combat and a master crafted bolt pistol that inflicts one Red die + one White die for shooting with a maximum range of 12 squares.

Renowned Archivist: Ezekiel uses the rules of Terminator Archivists. He can also use his 4 psy power cards as virtual Life Points in the event of injury.

It benefits from the "Parry", "Endurance" rule.

Master Crafted Bolter Pistol: Can do Rapid Fire, can re-roll a dice in an attempt to improve his score.

A special character eliminated brings 35 points to the Alien player.

Scouts and Terminators: The rules are the same as for classic Scouts and Terminators. Scouts can use Dark Angels Equipment cards and have access to the same supports as scouts from other chapters (Imperial Assassin, Scout Bike and Sister of Battle Canoness).

Terminators can only use the following cards: Melta Bomb, Blind Grenades, Targeter, and Brother-in-Arms. They have access to the same supports as the Terminators of the other chapters (Chaplain or Archivist).

You can exchange your Space Marine squad for a Deathwing Terminator Devastator squad by sacrificing 5 equipment cards instead of 4. You can equip each of your Terminators with one of the following weapons: Heavy Flamer, Heavy Plasma Gun, Cyclone Missile Launcher or Assault Cannon.

The Terminator Commander has 6 Life Points and is equipped with a Power Sword that allows the use of two Red Dice for hand-to-hand combat and a Storm Bolter that inflicts two Red Dice for firing.

Space Wolves:

Space Wolves do not use conventional weaponry: They do not have access to heavy weapons.

You can equip your Marines with a bolt pistol and melee weapon that inflicts two White dice for melee combat and two White dice for shooting with a maximum range of 12 squares.

You can swap the bolt pistol and melee weapon of 2 of your Marines for a chainsword and a plasma pistol which inflict one Red Die + one White Die for the melee combat and one Red Die + one White Die for shooting with a maximum range of 12 squares.

One of your Marines can be equipped with a pair of Lightning Claws that inflict two Red Dice + two White Dice for melee combat. A Marine with Lightning Claws can attack diagonally.

One of your Marines can be equipped with special weapons among the Plasma Gun, Flamer, and Melta Gun. This equipment does not affect their movement.

The Commander has 6 Life Points and is equipped either with a Power Axe that allows the use of two Red Dice for hand-to-hand combat and a Bolt Pistol that inflicts two White Dice for firing, either with Power Glove and Power Sword that inflict two Red Dice + two White Dice for melee combat.

Equipment Cards:

Melta Bomb
Blind Grenades

Berserk (x2): One of your Marines can re-roll one melee die to try to improve his score. Remains in use for the entire mission.

Weapons Master: All your Marines equipped with melee weapons roll one additional White die for melee combat. Remains in use for the entire mission.

Wolf Guard: Each time your commander suffers an injury, roll one Red Die : The result is the number of damage points he negates. Remains in use for the entire mission.

Spirit of the Pack: Any marine can take one wound instead of another. This card also works on the commander, whether he is the one taking the wound or a Marine. Remains in use for the entire mission.

Close Combat: All of your Marines equipped with melee weapons can attack diagonally in melee. During this attack, the opponent must roll one die less than normal. Remains in use for the entire mission.

Order Cards:

Fire!
Move it!
By sections!
Photon grenades!
Overwatch!

Assault: Each of your Marines can attack twice in melee. They can attack, move and attack again, or attack twice before or after moving.

Space Wolves Support:

You can take only one support for your Space Wolves team. Space Wolves have access to the following supports:

Wolf Priest: You can exchange two Marines for one Wolf Priest. A Wolf Priest has 1 Life Point, has an ARM 2 and he moves 6 squares.

It is equipped with a Fang of Morkai which allows you to use one Red Die + one White Die for melee combat and a plasma pistol which inflicts one Red Die + one White Die for shooting with a maximum range of 12 boxes.

It benefits from the "*Parry*" and "*Fervor*" rule.

Fang of Morkai: Any friendly figure located on a square adjacent to the Wolf Priest that should be destroyed is in fact KO'd with a Life Point. Does not work on models already KO'd or if the Wolf Priest himself is KO'd.

Iron Priest: You can exchange two Marines for one Iron Priest. An Iron Priest has 1 Life Point, has an ARM 2, and moves 6 squares.

It is equipped with a Bolter which uses two White Dice for shooting and a Power Axe which uses two Red Dice for melee combat. He benefits from the same rules as the Tech-Priest: "*Repair*", "*Servo-arm*" and "*Tech Expert*".

Space Marine Bike: You can exchange two Space Marines for a Space Marine on Assault Bike. A Space Marine on Assault Bike has 1 Life Point, an ARM 4 and it moves 8 squares. The bike is 3 squares long and 1 square wide. There can be only one bike per squad.

He is equipped with a Bolt Pistol and a Combat Blade and uses two White Dice for melee combat.

The bike follows the same rules as the Tarantula. It has an Arm 5.

You can either attack the bike or the pilot for melee combat. If the bike is destroyed, replace it with wreck markers and place a Space Marine equipped with a Bolter on one of the adjacent squares. If the Space Marine is destroyed, the bike is left in place and a Space Marine equipped with a Bolter can use it if he is on a square adjacent to it.

For the shots, she uses Twin Bolters which can either make two shots with two White Dice, or a single shot with four White Dice. She can only shoot in her front arc.

The bike is moved counting from its front edge. It can pivot like the Tarantula around its middle square. Unlike the Tarantula, the Space Marine on Assault Bike can move and fire.

It also benefits from the following rule:

Fast: The biker can sacrifice its Combat Action to move an additional 4 squares. This bonus is not doubled with "Order" cards which increase movement.

A support eliminated brings 25 points to the Alien player.

Space Wolves Special Characters :

You can only use special characters if you are the only Space Marine player. A team can only have one special character.

Njal Stormcaller: You can incorporate Njal Stormcaller into your Space Wolves squad by sacrificing two Equipment cards. He then replaces a Marine with the following profile: Movement of 6 squares, 1 Life Point and ARM 3. He is equipped with a Staff of the Stormcaller which allows the use of two Red Dice for hand-to-hand combat and a master crafted bolt pistol that inflicts one Red die + one White die for shooting with a maximum range of 12 squares.

Renowned Archivist: Njal Stormcaller uses the rules of Terminator Archivists. He can also use his 4 psy power cards as virtual Life Points in the event of injury.

It benefits from the "*Parry*", "*Endurance*" rule.

Master Crafted Bolter Pistol: Can do Rapid Fire, can re-roll a dice in an attempt to improve his score.

Dreadnought: You can exchange three Space Marines for one Dreadnought. A Dreadnought has 3 Life Points, occupies 4 squares, has an ARM 3, and moves 4 squares.

It is equipped with the choice of a Twin Laser Cannon, an Assault Cannon (Same profile as a Terminator Assault Cannon) or a Heavy Plasma Gun for shooting and a Combat Fist for melee combat. He can exchange his Combat Fist for a Cyclone Missile Launcher (In this case, he fights in melee with one Red die + one White die).

Combat Fist: Uses two Red Dice and two White Dice for melee combat and incorporates a storm bolter.

The dreadnought follows the same rules as the Alien player's dreadnought regarding movement and weapons. A dreadnought without a Combat Fist uses one Red die + one White die in melee.

A special character eliminated brings 35 points to the Alien player.

Scouts:

The rules are the same as for classic Scouts. Scouts can use Space Wolves Equipment cards but do not have access to the same supports as Scouts from other chapters (Imperial Assassin, Scout Bike and Sister of Battle Canoness):

Scouts can be included in Space Wolves squads. You can replace one Space Marine with two Space Wolves Scouts and have up to four Scouts in your squad.

You can also replace your entire Space Wolves squad with a Space Wolves scout squad. Space Wolves Scouts have the same weapon options as regular Scouts.

You can also equip up to two scouts with a melee weapon that allows you to use one Red die + one white die for melee combat and a plasma pistol that inflicts one Red die + one White die for shooting with a maximum range of 12 squares.

Terminators:

The rules are the same as for classic Terminators. Terminators can use the following Space Wolves Equipment cards: Melta Bomb, Blind Grenades, Berserk, Wolf Guard, Spirit of the Pack, and Brother-in-Arms. They have access to the same supports as the Terminators in the other chapters: The rules are the same as the Chaplain for the Terminator Wolf Priest and the Archivist for the Terminator Rune Priest.

The Terminator Commander has 6 Life Points and is equipped with a Power Sword that allows the use of two Red Dice for hand-to-hand combat and a Storm Bolter that inflicts two Red Dice for firing.

IV) Play in themed ships:

The Alien player can offer to play with variants to have thematic ships such as an essentially Tyranid, Orc or Chaos ship.

Dreadnoughts and Androids are part of the ship's defense system and can therefore always be played, regardless of the theme.

Here are some ideas to change from the classic game:

Chaos :

- Gretchins can be replaced by Cultists with the same profile.
- Orks can be replaced with Gangers of Necromunda with the same profile.
- The Chaos Space Marines remain unchanged.
- Androids can be replaced by either Veteran Chaos Marines or Chaos Terminators.

Veteran Chaos Marines:

Veteran Chaos Marines can attack twice melee, the same target or two different targets.

Mvt: 6

Arm: 2

Fire: 2D White

C / C: 2D White

C / C: 2D White

LP: 1

Chaos Terminators:

Chaos Terminators have the same profile as Space Marine Terminators.

Mvt: 4

Arm: 3

Fire: 1D Red + 1D White

C / C: 1D Red + 1D White

LP: 1

You can include one Chaos Terminator with Autocannon that has the following profile:

Mvt: 4

Arm: 3

Fire: 2D Red (like Assault Cannon)

C / C: 2D White

LP: 1

Abaddon the Despoiler (*You can exchange a 50-point Dreadnought for Abaddon the Despoiler*):

Mvt: 6

Arm: 3

Fire: 1D Red + 1D White

C / C: 2D Reds + 2D White

LP: 1

Champion of Chaos: From the moment Abaddon is on a board game, the Alien player draws two Event cards and chooses to use only one or both. If he only plays one, the second goes back to the Event card stack.

Fabius Bile (*You can exchange a 25-point Dreadnought for Fabius Bile*):

Mvt: 6

Arm: 3

Fire: 1D Red + 1D White

C / C: 1D Red + 2D White

LP: 1

Master of Androids: All androids located on a square adjacent to Fabius Bile have their Armor increased by 1.

All Event cards that apply to Orks and Gretchins are applicable to the models that replace them on the board game. The "Genestealers" Event cards are used as Joker to save a model that has just been destroyed (except Dreadnought): The card is then discarded and the model remains on the board game, regardless of the number of wounds it has suffered.

Orc :

- Gretchins and Orks remain unchanged.
- Chaos Space Marines can be replaced by Nobz with the same profile as Chaos Space Marines. A Nob will have a heavy weapon that will be played like a missile launcher and a Nob will have the same profile as a Chaos Commander.
- Androids can be replaced by Freebooters or Warboars.

Freebooters:

Freebooters can shoot twice, the same target or two different targets.

Mvt: 6

Arm: 3

Fire: 1D Red + 2D White

C / C: 1D Red + 1D White

LP: 1

You can include one Freebooter with a Heavy Plasma Launcher that has the following profile:

Mvt: 4

Arm: 3

Fire: 2D Red + 2D White

C / C: 2D White

LP: 1

Warboars:

Ork on Boar can make close combat twice, the same target or two different targets. We move warboars counting from its leading edge. They can rotate from their front or their rear.

When they are destroyed, replace them with a 3 point Ork.

Mvt: 8

Arm: 2

Fire: 1D Red + 1D White

C / C: 1D Red + 1D White

LP: 1

Zodgrod Wortsnagga (*You can exchange a 25 Point Dreadnought for Zodgrod Wortsnagga*):

Mvt: 6

Arm: 2

Fire: 1D Red + 1D White

C / C: 2D Red

LP: 1

Gretchin Master: All Gretchins located on a square adjacent to Zodgrod Wortsnagga have their Armor increased by 1.

Ghazghkull Thraka (*You can exchange a 30 Point Dreadnought for Ghazghkull Thraka*):

Mvt: 6

Arm: 3

Shooting: 3D Reds (Like Las Cannon)

C / C: 2D Reds + 2D White

LP: 1

Ork Champion: Ghazghkull Thraka uses a Kustom weapon that fire like a Las Cannon except if the dice total is 0, he takes damage from a roll with the same number of dice.

All Event cards that apply to Chaos Space Marines are applicable to the models that replace them on the board game. The "Genestealers" Event cards are used as Joker to save a model that has just been destroyed (except Dreadnought): The card is then discarded and the model remains on the board game, regardless of the number of wounds it has suffered.

Tyrannids :

- Gretchins can be replaced by Termagants with the same profile.
- Orks can be replaced by Genestealers with the profile of a Genestealer.
- Chaos Space Marines can be replaced by Hybrids with White Dwarf # 134 profiles. Up to two Hybrids (those that replace Chaos Commander and Missile launcher) could have one of the following heavy weapons: Autocannon, Missile Launcher or Conversion Beam.
- The Androids can be replaced by Tyrannid Warriors equipped with either Deathspitter or Bone Swords with the profiles of White Dwarf # 134.

Patriarch Genestealer (*You can exchange a 25 Point Dreadnought for a Patriarch Genestealer*):

Mvt: 6

Arm: 3

Fire: 1D Red + 1D White

C / C: 2D Reds + 2D White

LP: 1

Familiar: The Genestealer Patriarchs spawn with 3 familiars that they can use as Joker to save them if destroyed. Remove one Familiar from the board game and the Patriarch remains on the board game, regardless of the number of wounds it has suffered.

Familiars move 8 squares, have an ARM 0 and throw 2 White Dices for melee combat.

Carnifex (*You can exchange a 50 point Dreadnought for a Carnifex*):

Mvt: 6

Arm: 5

Fire: 3D Reds (As Conversion Beam)

C / C: 3D Reds + 2D White

LP: 1

Resistant: Whenever the Carnifex takes damage, roll one Red Die : On any result other than 0, it remains alive.

All Event cards that apply to Androids, Chaos Space Marines, Orks and Gretchins are applicable to the models that replace them on the game board. Genestealers Event cards are used as such.

V) Game balance:

These rules are intended to bring diversity to Space Crusade gameplay. The Alien player will aim to make the pleasure last by playing as many tricks as possible to gain points with the Event cards played, in addition to the losses he will inflict. The rules that apply to the Space Marine Player models do not necessarily apply to the Alien Player (No *Rapid Fire* for Chaos Marines for example).

All players align with the highest rank in the game: If at least one player has a rank, all players, including Alien, has one. This is to have an equal level at the start of the game.

For alternate new team options (Inquisition, Adeptus Mechanicus, Imperial Guards) : Each model is worth 10 points if it has standard equipment, 20 if it has a special weapon or a heavy weapon. The Commander is worth 30 points (For Inquisitor, the Alien scores only if all Inquisitors have been destroyed). Each support eliminated brings 25 points to the Alien player. Each special character eliminated brings 35 points to the Alien player.

For any questions, feel free to ask : zedouds(at)gmail(dot)com Thanks to all people that have worked hard to improve rules; especially Usagi3.
